

KONICA MINOLTA

## PRESS RELEASE

15 May 09

### **bizhub 751 sets to transit into powerful stylish MFP:**

**Serves as a centralized and secured device to manage and fulfill office requirements.**

bizhub 751 creates a new breakthrough technology via several new enhancements found in MFPs. In terms of design, the infoline designed device has upgraded to a large 8.5-inch full colour LCD control panel which allows for a range of convenient viewing angles. This helps users to locate documents efficiently. It can cover a print speed up to 75 black and white pages per minute.

Classified under MFPs, it contains an extensive range of security features and powerful built in systems. This new set of security features are targeted to gain user recognition with tremendous improvement. Security features include biometric, IC Card authentication and improved PDF encryption. Biometric and IC Card authentication can be used by registered users who need to print securely. Under Biometric option, users' unique finger vein pattern can be traced and it eliminates the need for passwords. This is a convenient way to use the device. If you choose to use IC Card, information can be updated easily. Improved PDF encryption allows users who wish for further security protection in hard disk drive. They have the option of using HDD password lock, data encryption and random erase format so that information will not be leaked out to external parties. All these features are optional for selection.

In terms of storage, this new machine can store more data since HDD memory has increased to 60GB. The most important feature of bizhub 751 lies in the Gigabit Ethernet interface up to 1000 Base-TX network connection. bizhub open API technology offers a unified platform for seamless integration of 3<sup>rd</sup> party software. Direct Printing can be done via PageScope or USB. Users can easily access USB port in front of machine to print directly via USB. The PageScope DirectPrint allows users to drag and drop PDF/TIFF/XPS files into an icon to print them automatically. Under this new model, encrypted PDF, XPS direct print can be selected as one of the options. Another important application PageScope Enterprise Suite allows authorised users to track all devices, enhances network security and to monitor the network activity.

For retrieval convenience from HDD, One of the options is to utilise Scan to USB device whereby scanned data in main unit from HDD to USB memory devices can be found. As a result, scanned data may be conveniently shared among authenticated users.

This model is especially useful for users who demand for full security enabled functions in MFPs which can help medium to large offices to achieve high product reliability and durability. The device can integrate speedy output time with robust security features and flexible networking into a powerful centre office machine which offers a unique solution to the most pressing demands for enterprises in any line of business. To various consumers, this can be considered as one good option who is concerned with security and print cost.

## ***About Konica Minolta Business Solutions (S) Pte Ltd***

Konica Minolta Business Solutions is in charge of the sales and marketing functions of bizhub line series multifunctional copiers and printers. Having established in Singapore for more than 30 years, Konica Minolta is a key supplier of full colour and black-&-white digital copier and printer solutions which provide prompt on-field support by a team of professionally-trained Service Technicians.

In an attempt to further boost the team spirit of the corporation, we have introduced a new Konica Minolta slogan called simply BOLD. Konica Minolta wants to take up the challenge to make innovative ideas happen. The first step is to come up with ways which result in discarding outdated thinking and ineffective behavior. Next, the employees must inspire each other by sharing concrete ideas on how to replace outdated habits with bold new innovations. Both steps constitute the idea of simply BOLD in order to realize the full potential of Konica Minolta. This campaign will ensure that the right direction is taken towards a bold move in the future and a platform to communicate our ideas.
