Konica Minolta to Implement Robotics Solution for Leading Electronics Manufacturing Technology Provider

SINGAPORE, Sept. 13, 2018 -- Konica Minolta Business Solutions Asia (BSA), an integral value provider, has been awarded a contract to implement robotic solutions by a leading electronics manufacturing technology provider to advance their digital transformation in their workplace.

To align with the government direction to move toward Industry 4.0, the leading technology provider decided to transform their manufacturing process with the deployment of robotics solution. The autonomous robots, designed for internal transportation and logistics enable business to optimise their processes within the manufacturing floor across the supply chain through technology innovation.

The robotics solution created efficiencies by eliminating bottlenecks across the material flow process, improving the throughput through better management of production capacity. By transforming the delivery process, staff can focus on higher value activities and enjoy reduced exposure to injury-prone tasks.

“Konica Minolta supports Singapore’s move towards Industry 4.0 and becoming a smart nation by offering solutions that promote operational agility. Robotics solutions allow companies to automate production processes to provide a safer and more efficient workplace”, said Mr. Jonathan Yeo, Director and General Manager of Konica Minolta BSA.

With the robotics solution, the leading electronics manufacturing technology provider can focus more on safety, efficiency, and reliability in their operations, ensuring the highest quality manufactured products.
